Drawings

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because an element "18" is described as "a set of arcuate ribs" but is shown as a solid black line. Figures 1 and 3 must include section lines showing where the views in figure 2 and 4 are located. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "at least one spline having a spline stop at one end" as recited in claim 1; and "the spline stop is a bevel formed on the end of the spline" as recited in claim 2, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an

Art Unit: 3654

application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Puckett et al., U.S. Patent No. 6425551 B1.

With respect to claims 1 and 4-6, Puckett '551 shows a tubular body having open ends (24, 26) and including an annular outer surface (20) for receiving the sheet roll (16);

An annular inner surface (22) defining a bore for receiving the spindle (12); circumferentially spaced apart splines (28) projecting radially inward from the inner surface and extending axially between the open ends for nesting in correspond slots (30) in the spindle, at least one spline having a spline stop (34) at one end for frictionally engaging the spindle to retain the core axially; and a set of ribs (near 36) projecting radially inward from the inner surface near the one end and extending between the axial splines for axially limiting assembly of the core onto the spindle, see figures 1-2.

With respect to claims 2-3, Puckett '511 shows the spline stop (34) is a bevel formed on the end of the spline, see figures 6-7.

With respect to claims 7-8, Puckett '511 shows three splines and spaced apart by about 120 degrees, see figure 1.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
